

READY-TO-RUN PROMPTS

10 USE CASES.

Copy a prompt. Paste it into Claude Code. Watch it research, write in your voice, and publish - all from a conversation. Work top to bottom; each one builds on the last.

TEN WAYS TO START.

RESEARCH

RUN YOUR FIRST RESEARCH

Goal: get a clean, sourced summary on any topic.

PASTE THIS

/research the latest AI tools for solo founders in 2026

EXPECT

Claude searches recent sources, reads them, and writes a TL;DR + key findings + sources to outputs/.

TIP

Broad topic? Claude asks one clarifying question - answer it and it continues.

RESEARCH

SHARPEN A REQUEST

Goal: control the angle and the time window.

PASTE THIS

/research AI lead-generation for B2B founders. Focus on tactics people actually shipped in the last 60 days, not predictions. Give me 5 sources.

EXPECT

Tighter findings, recent-only sources, and a "what this means for founders" takeaway.

TIP

Name the audience and the timeframe - you get sharper results.

SET UP YOUR VOICE

Goal: teach Claude to write like you (one time).

PASTE THIS

Open `.claude/skills/voice/SKILL.md` and help me add my voice samples. I'll paste three of my posts and you put them in the right place.

EXPECT

Claude drops your posts into the samples section without breaking the file's rules.

TIP

Pick posts that sound the most like you - casual, real, your emojis.

VOICE

WRITE IN YOUR VOICE

Goal: turn an idea into a post that sounds like you.

PASTE THIS

`/voice` a short LinkedIn post about why I started learning to build with AI

EXPECT

A draft in your style - no corporate buzzwords, no em-dashes. Claude asks how long you want it.

TIP

Give it one concrete detail (a number, a moment) and the post gets real.

VOICE

ADJUST TONE & LENGTH

Goal: refine a draft without losing your voice.

PASTE THIS

Make that post 30% shorter, open with a question, and keep it warm not salesy.

EXPECT

A rewrite that still respects every voice rule.

TIP

Describe the change in plain language - "punchier", "less braggy", "end on a question."

ONE NOTE, TWO POSTS

Goal: get more mileage out of a single research run.

PASTE THIS

Using my latest research in outputs/, write me two versions: a 3-line hook post and a longer story post. Both in my voice.

EXPECT

Two drafts from the same source material, saved so you can compare.

TIP

Post the short one first; keep the long one for later in the week.

CONTENT AGENT

THE FULL PIPELINE

Goal: research, draft, and review in one flow.

PASTE THIS

/content-agent write a LinkedIn post about AI tools that save solo founders time

EXPECT

Claude researches, drafts in your voice, then asks: post as-is, revise, or cancel. It never posts on its own.

TIP

One command chains the research and voice skills for you.

CONTENT AGENT

REVISE IN THE PIPELINE

Goal: iterate on the draft before anything goes live.

PASTE THIS

Revise: cut the intro, lead with the strongest tip, and add a line about my own experience.

EXPECT

The draft updates, voice rules still hold, and you're asked again - revise or post.

TIP

Loop revise as many times as you want. Nothing publishes until you choose to.

POST TO LINKEDIN

Goal: publish the approved draft for real.

PASTE THIS

Looks great. Post it to LinkedIn.

EXPECT

With your LINKEDIN_TOKEN set, Claude runs the tool and shares the live URL. The draft is saved to outputs/ either way.

TIP

No token? See README §4. A "Sign In with LinkedIn" token won't work - you need the Share on LinkedIn product and w_member_social scope.

BUILD YOUR OWN

EXTEND THE KIT

Goal: make Claude Code build you a new skill.

PASTE THIS

Create a new skill called "newsletter" in .claude/skills/ that turns one of my research notes into a short email newsletter in my voice. Follow the same format as the existing skills.

EXPECT

A new SKILL.md you can run as /newsletter next time.

TIP

This is the real superpower - the kit grows as you ask for more.

NOW YOUR TURN.

Open the project in Claude Code, paste prompt #01, and keep going. Every prompt you run teaches you a little more about building with AI.
